

# Program Presentations - Join us in the Library

Programs are presentations or seminars given on the hour in a theater type setting. They include many topics revolving around the fly fishing lifestyle, from remote fly fishing

destinations to the right fly for the area. With your entry into the show you can attend as many of these as you wish. Programs will be held in the Library at Park High School.

## **Dutch Baughman**

Life member: IFFF and Tying Group; passionate fly fisher, and steelheader

The History and Evolution of the Spey and Dee Flies. This program will focus on the evolution of the salmon fly pattern primarily during the 19th century and its impact on today's flies; this program will include reference to the simultaneous development and evolution during the same period of time of the 2-hand casting style. This program is the result of 15 years of concentrated study.

## **Norm Crisp**

Norm Crisp is the owner and head guide of STREAM SIDE ADVENTURES. Norm has led trips to Chile, Mongolia, Missouri and Wyoming. Norm's background as both a fisheries biologist and a water resources engineer gives him a unique perspective on fly fishing for trout.

Reading Trout Streams: Understand Stream Flow and a Trout's Needs. A basic understanding of how water flows in a stream is a critical skill that separates a great day on the stream from an average day. This program will help you understand what makes one stream location much better than another nearby one by providing a basic understanding of "fluid mechanics" and how a trout's needs intersect.

## **David Folkerts**

David Folkerts is currently the Chief Operations Officer for Project Healing Waters Fly Fishing, Inc. (PHWFF). He is a medically retired US Army Captain who was severely wounded in Iraq in 2005. During his recovery at Walter Reed Army Medical Center in Washington DC he was introduced to PHWFF and the healing powers of the sport of fly fishing.

Healing Waters: A soldier's story & introduction to Project Healing Waters Fly Fishing. David Folkerts the current COO of Project Healing Waters Fly Fishing (PHWFF) will give an introductory presentation on PHWFF. He will also share his personal story as a US Army soldier who was wounded in Iraq in 2005 that found healing through fly fishing with Project Healing Waters Fly Fishing.

## **Kelly Glissmeyer**

Kelly G. Glissmeyer is well-known western fly tier. In addition he is a fly fishing author and photographer. He currently edits the "At the Vise" column for the Flyfisher magazine as well as the contributing author to the "Fly Tips" column in the same magazine. He also has regular articles published in other fly fishing magazines.

Today's Stillwater Strategies. Powerpoint program on utilizing indicators for both shallow water and deep water stillwater fly fishing. Methods, tactics, gear, and flies.

## **Yashuhiro Hamano**

Graduated from Department of Cinema at the College of Arts of Nihon University. Hamano is general producer and business consultant of FROM-1st, Tokyu Hands, AXIS, QFRONT, Q-AX, AO Aoyama and many other creations.

Fish God / SAKANAKAMI movie screening. The story is the old fisherman traveled and did fly-fishing around HOKKAIDO, the north of Japan. There is full of beautiful nature. Theme of this movie is, One, Save the TIDAL FLATS. Second, The preservation of "ITO". (ITO also known as Taimen is the fish which is designated as an endangered species. It is called "fish of ghost".)

## **Peg Kingery**

Two of the activities that I'm most passionate about are fly fishing and teaching others about fly fishing. I'm a member of Kelly Creek Flycasters, Lewiston, Idaho; fly fishing instructor for Casting for Recovery North Idaho/ Eastern Washington; and secretary of the IFFF's Western Rocky Mountain Council. I'm particularly fond of a 5 foot 2 weight fly rod that I use when fishing little-known small streams in northern Idaho.

Fish Foods 101: Stream Entomology for the Beginning Fly Fisher. Since there are thousands of fly patterns designed to entice a fish, it can be overwhelming for the new fly fisher as s/he begins filling fly boxes for fishing trips. This presentation will discuss ways of identifying the food available for fish by looking at its environment; take some of the mystery out of "matching the hatch"; introduce some of the most common fish foods; and teach how to select flies that will bring fish to your net. The focus will be on fresh water trout. A degree in Entomology isn't necessary to be a successful fly fisher!

## **Soon Lee**

Soon Lee, a retired dermatologist, now serves on the IFFF Board of Directors. Soon has been teaching fly casting since the 1980's.

Understanding your fly cast !! in a nutshell, I & II. Terms such as "tight loop," "open loop," "wide loop," and "narrow loop" are used liberally worldwide.

Yet one instructor's definitions may differ from another's. Prevailing understanding of "casting stroke" and "stop" adds to the confusion. Better definitions will make for better teaching.
